PROFILE

Product Owner & Growth Lead for AI-assisted music tooling — fluent across MIR research, ML delivery, and editorial craft. At My Sheet Music Transcriptions, owned roadmap, discovery, and delivery of the AI transcription engine with a 6-person team, and contributed to >140% cumulative revenue growth, €170K+ key accounts, and repeated 34–40% YoY growth windows.

"The bottleneck has shifted from writing code to specifying and verifying it. Treat LLMs like a controlled deployment pipeline — ship faster, migrate safer."

EXPERIENCE

My Sheet Music Transcriptions

Terrassa · Sep 2019 — present

Growth Lead & Product Owner

Dec 2024 — present

- Own R&D and product roadmap for the AI-assisted transcription engine; lead a 6-person musicology + engineering team running product-led research.
- Co-curate a SOTA dataset (4,000+ scores, 200+ audio hours); implement, train, and ship deep models for alignment between audio, MIDI, and MusicXML.
- Co-develop UI/UX for annotation and human-in-the-loop workflows — tailored tooling that lets subject-matter experts steer model inference and training data.
- Run a parallel B2B engagement — the anchor account I've owned since my KAM tenure: manage an 11-person cross-functional team delivering against client SLAs and editorial QA. Sustained trust translated into 2× annual spend across three years.

Jun 2023 — Dec 2024

Key Account Manager & Tech Lead

- Grew prioritized accounts beyond €170K, unlocking +34% annual revenue lift.
- Directed an 11-person music + tech organization; guarded editorial QA across thousands of scores.

Sep 2019 — Jun 2023

Transcriber → Assistant Manager · Music Specialist

- Scaled from handmade craft (~20 scores/mo · 200+ on-time deliveries, +36% revenue window via CX & staffing) into org bandwidth.
- Merged musician insight with product analytics for ~40% growth.

UPF-BMAT Chair in AI & Music

Mar 2024 — present

Member of the Scientific Committee · Barcelona

Scientific committee: open music-AI agendas; bridges MTG with industry/policy partners.

Epidemic Sound

Jan 2023 — Jul 2023

Master's Thesis · Music Applied Machine Learning · Stockholm (Sweden)

ML thesis internship: SSL triplets on raw audio; MSD handling and segmentation. Hands-on with Google Cloud Compute, VM instances, and Vertex AI. A&R theory seminars linking research ↔ catalog teams gave deep exposure to the industry dynamics, tech stack, infrastructure, and product development of a world-class unicorn.

RESEARCH SPOTLIGHT

High-level musical content in the time domain — MSc thesis
